

Bedbug Post-Treatment Guide

Thank you for choosing our professional bed bug treatment service. Please review and follow these instructions carefully to ensure the best results. For questions, call 309-263-0341

Re-Entry

- Do not enter the home until the technician says it is safe (usually **4–6 hours** after treatment).
- Allow treated areas to dry completely before replacing bedding or sitting on furniture.

Beds & Furniture

- Do not put mattress or box spring encasements back on until your technician advises.
- Avoid moving beds, couches, and other treated furniture for at least **48 hours**.
- Leave beds pulled slightly away from the walls to reduce hiding places.
- Do Not buy new furniture right away. If you get rid of furniture, **throw it away** rather than sell it.

Cleaning & Laundry

- You may resume washing bedding, clothing, and other personal items as needed.
- Items already cleaned before treatment should remain sealed in plastic bags until your technician confirms it's safe to reopen.
- Vacuum floors, baseboards, and upholstered furniture after **48hrs**, then continue vacuuming **daily**. Avoid vacuuming any dust along baseboards or bed frames.
- Immediately discard vacuum contents in a sealed bag **outside**.
- Do not shampoo carpets or mop floors along baseboards for **at least 2 weeks** unless instructed.

What to Expect

- Bed bug activity may be seen for **7–14 days** after treatment. This is normal.
- You may notice bites during this period — they should decrease as the treatment takes effect.

Follow-Up Service

- A **follow-up inspection/treatment** is usually scheduled **2–3 weeks** after the initial visit.
- Be sure to maintain preparation steps (reduced clutter, bagging items, etc.) until your technician confirms the problem is resolved.

Reminder: Success depends on both professional treatment and customer cooperation. Following this guide will help ensure complete elimination.
