

Flea Post-Treatment Guide

Thank you for choosing our professional flea treatment service. Please follow these important steps after treatment to ensure the best results. For questions, call 309-263-0341

Re-Entry

- Do not enter the home until the technician says it is safe (usually **4–6 hours** after treatment).
- Allow treated areas to dry completely before people or pets return.

Cleaning & Vacuuming

- Wait **48 hours** before vacuuming.
- Vacuum carpets, rugs, and upholstered furniture **daily for 2–3 weeks**. (This helps remove flea eggs, larvae, and pupae as they hatch.) Avoid vacuuming any dust along baseboards.
- Dispose of vacuum bags or empty the canister into a sealed trash bag and discard **outdoors**.
- Do not mop or shampoo carpets for **at least 2 weeks**, as this may remove the treatment.
- Do not purchase new furniture right away. If you get rid of furniture, throw it **out** rather than sell it.

Pets

- All pets must be treated with a veterinarian-approved flea product (collar, topical, or oral) to prevent reinfestation.
- Wash pet bedding in **hot water** and dry on **high heat** at least once a week.

What to Expect

- Fleas may still be seen for **2–3 weeks** after treatment.
 - This is normal — eggs and pupae continue to hatch, but they will be exposed to the treatment and die.
- Consistent vacuuming and pet care are essential for complete elimination.

Follow-Up Service

- Technicians will determine if follow up is necessary at the time of service.
- If fleas are still active after 3 weeks, contact us for follow-up.

Reminder: Flea control requires a partnership between treatment, pet care, and ongoing cleaning. Following this guide will help ensure full success.
